## Report Overview

The level of support for each class is determined through interface instantiation and beyond that a set of tests. Based on the results, the class will fall into one of four categories:

- 1) Supported - This means the interface could be created and there were no test failures
- 2) Partially supported - This means one of two outcomes was achieved; that the interface could be created and there were some test failures or for classes with no corresponding test cases, simply that the interface was created successfully.
- 3) Unsupported - This means one of two outcomes was achieved; that the interface could not be created for classes with no corresponding tests or that the interface was created but all test cases failed.
- 4) Unverified - This means the class doesn't support interface instantiation without a complex set of instructions and there are no test cases by which the level of support can be determined.

## Results
